

Self Measurement Chart for Andrew Tucker Shooting Jackets

Measuring Instructions

Please read carefully before proceeding and ensure that **all** sections are completed!

- A. All measurements should be taken whilst wearing the clothing that you would normally wear under the jacket when shooting (i.e. a shirt and a sweat-shirt).
- B. Chest, Waist and Hip measurements should be taken with the arms relaxed at the sides of the body. Please add 2" (5cm) to each measurement and fill in the form accordingly.
- C. Measurement 4 should be taken with the upper arm raised parallel to the ground and straight out to the side maintaining the line of the shoulders.
- D. Measurement 5 should be taken with the arm down the side, with the tape running from the armpit to the joint of the wrist.
- E. Measurement 12 should be taken across the back from the tip of one shoulder blade to the other and NOT to the outside of the arms.
- F. When taking measurement 13 it is important to remember that ISU/UIT regulations state that "the jacket may not be longer than the bottom of the clenched fist".

Please allow 6-8 weeks for delivery
